

Parcel Rate Calculator for Blackthorn International Orders

The latest version of the parcel rates calculator spreadsheet can be found:

P:/Transport/Groupage & Parcel Carriers/

Step 1 is to work out the size and weight of the parcel to be shipped

In the yellow boxes, select the product you are sending and the quantity. This will then auto fill the other boxes.

Enter the dimensions and destination country into the DHL section. The price populates.

In the Royal Mail section, select the destination country, desired shipping service and the next weight bracket.

The Royal Mail calculator is based on international small parcels to max 2kg or 5kg for the economy service.

The Royal Mail service field will only show services that are available to the destination country.
